YOUR TRAINER

About the Trainer

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte. Ltd.

ROLE

Principal Trainer, Tertiary Infotech Academy Pte. Ltd.

QUALIFICATIONS

PhD - specialises in AI, automation and software engineering.

DELIVERS

WSQ courses on AI agents, automation (n8n) and app development.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

CompTIA Cybersecurity Analyst (CySA+) Training · TGS-2024049211

© 2026 Tertiary Infotech Academy Pte Ltd

5

HOUSEKEEPING

Ground Rules

1 Set your mobile phone to silent mode.

2 Participate actively — no question is too small.

3 Mutual respect: agree to disagree.

4 One conversation at a time.

5 Be punctual; return from breaks on time.

6 75% attendance is required.

DMAIC Project Flow

- 1 Define the problem and customer impact.
- 2 Measure current performance with agreed KPIs.
- 3 Analyze patterns and validated root causes.
- 4 Improve with countermeasures linked to causes.
- 5 Control with ownership, monitoring and response actions.

Slides 21-24: Lab 01 - Lean Six Sigma Basics and Project Selection

You have been asked to support an improvement initiative. Before mapping or measuring the process, you must choose a project that is valuable, realistic, and appropriate for a Green Belt.

Objectives

- Explain Lean Six Sigma fundamentals.
- Describe the Green Belt role.
- Identify customer value and COPQ.
- Select a suitable improvement project.

Step Highlights

- 1 Write your own definition of Lean.
- 2 Write your own definition of Six Sigma.
- 3 List the five DMAIC phases and one activity in each phase.
- 4 Describe what a Green Belt typically does in an improvement project.
- 5 Select three possible process problems from your workplace or a trainer scenario.
- 6 For each problem, identify the customer affected.
- 7 Estimate cost of poor quality, including rework, delay, errors, complaints, or morale impact.
- 8 Use the Kano model to classify customer needs as basic, performance, or delight factors.
- 9 Write $Y=f(x)$ for each project idea.
- 10 Score each project by impact, feasibility, data availability, and scope.
- 11 Select the best project for the remaining labs.
- 12 Draft a problem statement and goal statement.

Validation and Deliverables

- The selected project is small enough for a Green Belt.
- The problem statement uses observable facts.
- The goal statement is measurable.
- Customer value is clearly described.
- Project selection worksheet.
- COPQ notes.
- Kano notes.
- Draft problem and goal statements.

Slides 26-29: Lab 02 - SIPOC, Process Map, and Eight Wastes

The selected project needs a shared view of the process. You will map the process and identify where waste may be harming customer value.

Objectives

- Build a SIPOC.
- Create a current-state process map.
- Identify value-added and non-value-added steps.
- Locate the eight wastes.

Step Highlights

- 1 Define the start and end points of the process.
- 2 List the major outputs and customers.
- 3 List the key inputs and suppliers.
- 4 Create a SIPOC table.
- 5 Draw a current-state process map.
- 6 Include decision points, approvals, handoffs, queues, and rework loops.
- 7 Label each process step as value-added, business-value-added, or non-value-added.
- 8 Identify the eight wastes:
- 9 Mark the two most visible waste areas on the map.
- 10 Decide where data should be collected in Lab 04.

Validation and Deliverables

- SIPOC boundaries match the project.
- Process map shows the real current state.
- Waste examples are tied to actual process steps.
- Measurement points are identified.
- SIPOC.
- Current-state process map.
- Waste analysis table.
- Measurement point notes.

Slides 31-34: Lab 03 - Facilitation, Stakeholders, Kaizen, and A3

Green Belts often improve processes by working through people. You need to bring the right people together, keep discussion structured, and document the improvement story clearly.

Objectives

- Identify stakeholders.
- Plan a facilitated improvement meeting.
- Design a Kaizen event.
- Start an A3 report.

Step Highlights

- 1 List all stakeholders affected by the process problem.
- 2 Rate each stakeholder by interest and influence.
- 3 Identify likely supporters, blockers, and subject matter experts.
- 4 Write one engagement action for each key stakeholder.
- 5 Create an agenda for a 60-minute improvement meeting.
- 6 Include objective, ground rules, roles, timing, and expected outputs.
- 7 Plan a Kaizen event for one process pain point.
- 8 Define pre-work, event activities, and follow-up actions.
- 9 Create an A3 report with background, current condition, goal, and next step sections.
- 10 Practise explaining the A3 in three minutes.
- 11 Update the A3 based on peer or trainer feedback.

Validation and Deliverables

- Stakeholder actions match stakeholder concerns.
- Meeting agenda has clear outputs.
- Kaizen scope is small and practical.
- A3 report tells the project story simply.
- Stakeholder analysis.
- Facilitation agenda.
- Kaizen plan.
- Draft A3 report.

Slides 36-39: Lab 04 - Data Collection, KPIs, Run Charts, and Pareto

The project team needs baseline data. You will define what to measure, collect or use sample data, and visualize the problem.

Objectives

- Define a KPI.
- Create a data collection plan.
- Build a run chart.
- Build a Pareto chart.

Step Highlights

- 1 Select one primary KPI for the project.
- 2 Write an operational definition for the KPI.
- 3 Define unit, defect, opportunity, and target if applicable.
- 4 Identify data source, owner, frequency, and sample size.
- 5 Create a data collection plan.
- 6 Collect baseline data or use a trainer-provided dataset.
- 7 Check for missing values, duplicate records, and inconsistent categories.
- 8 Create a run chart showing performance over time.
- 9 Add notes for known events or process changes.
- 10 Create a Pareto chart for defect categories, delay reasons, or error types.
- 11 Identify the top category contributing to the problem.
- 12 Decide what issue should move into root cause analysis.

Validation and Deliverables

- KPI definition is clear enough for two people to measure consistently.
- Run chart uses time order.
- Pareto chart is sorted from largest to smallest.
- Analysis identifies where to focus next.
- KPI definition.
- Data collection plan.
- Run chart.
- Pareto chart.
- Focus area statement.

Slides 40-43: Lab 05 - Basic Statistics and Process Capability

After visualizing the data, you need to summarize baseline performance. The goal is to describe both the center and spread of the process.

Objectives

- Calculate basic statistics.
- Interpret variation.
- Calculate common Six Sigma metrics.
- Summarize baseline performance.

Step Highlights

- 1 Open the baseline dataset from Lab 04.
- 2 Calculate count, mean, median, minimum, maximum, range, and standard deviation.
- 3 Create a histogram for continuous data if applicable.
- 4 Identify whether the process has obvious outliers.
- 5 Calculate yield if good units and total units are known.
- 6 Calculate DPU if defects and units are known.
- 7 Calculate DPMO if opportunities are known.
- 8 Estimate sigma level using a trainer-provided conversion table if available.
- 9 Compare actual performance with customer or business target.
- 10 Write a short baseline summary using numbers and plain language.
- 11 Identify one question that still needs investigation.

Validation and Deliverables

- Statistics are calculated from the correct dataset.
- Variation is discussed, not only the average.
- Defect metrics use correct denominators.
- Baseline summary is clear to a non-statistical reader.
- Basic statistics table.
- Histogram if applicable.
- Yield, DPU, DPMO, or sigma worksheet.
- Baseline performance summary.

Slides 45-49: Lab 06 - Root Cause Analysis and FMEA

The team now understands the baseline problem. You will identify possible causes and use FMEA to decide where countermeasures are most needed.

Objectives

- Use Fishbone and 5 Whys.
- Validate suspected causes with evidence.
- Build an FMEA.
- Prioritize process risks.

Step Highlights

- 1 Select the biggest issue from Lab 04 or Lab 05.
- 2 Create a fishbone diagram.
- 3 Use categories such as people, process, material, equipment, measurement, environment, and management.
- 4 Choose two likely causes from the fishbone.
- 5 Complete 5 Whys for each selected cause.
- 6 Identify what evidence would support or reject each cause.
- 7 Review available data or collect quick observations.
- 8 Mark each cause as supported, unsupported, or needing more data.
- 9 Create an FMEA for the process step most related to the problem.
- 10 List failure mode, effect, cause, and current controls.
- 11 Score severity, occurrence, and detection.
- 12 Calculate RPN.
- 13 Identify the top risks for countermeasures.

Validation and Deliverables

- Root causes are not based only on opinion.
- 5 Whys reaches process-level causes.
- FMEA scores are discussed by the team.
- High-priority risks are clear.
- Fishbone diagram.
- 5 Whys worksheet.
- Evidence notes.
- FMEA.
- Prioritized root cause and risk list.

Slides 51-54: Lab 07 - Countermeasures, 5S, Kanban, and Poka-Yoke

The team is ready to improve the process. The countermeasures must address validated causes and be simple enough to test quickly.

Objectives

- Select countermeasures linked to root causes.
- Apply 5S and visual management.
- Use Kanban concepts.
- Design mistake proofing.

Step Highlights

- 1 List supported root causes and high-priority FMEA risks.
- 2 Brainstorm possible countermeasures.
- 3 Remove ideas that do not address a validated cause.
- 4 Use an impact-effort matrix to prioritize options.
- 5 Select one or two countermeasures for a small test.
- 6 Apply 5S to the relevant physical or information workspace.
- 7 Identify where visual management would help the team see status or errors.
- 8 Identify where a Kanban signal could prevent waiting, shortage, or overload.
- 9 Design one poka-yoke idea to prevent or detect an error earlier.
- 10 Draft standard work for the improved step.
- 11 Define test duration, success measure, and rollback condition.
- 12 Record expected benefits and possible side effects.

Validation and Deliverables

- Each countermeasure links to a supported cause or risk.
- Impact-effort matrix supports the selection.
- Standard work is clear enough for another person to follow.
- Test criteria are measurable.
- Countermeasure list.
- Impact-effort matrix.
- 5S action list.
- Kanban or visual control sketch.
- Poka-yoke idea.
- Draft standard work.

Slides 56-59: Lab 08 - Control Plan, Standard Work, and Project Close

The improvement has been selected and tested. You must make sure the process owner can sustain the result after the project closes.

Objectives

- Build a control plan.
- Define response actions.
- Finalize standard work.
- Present the project using A3.

Step Highlights

- 1 List the improved process steps that require control.
- 2 Identify the KPI or CTQ to monitor.
- 3 Define target, measurement method, frequency, and owner.
- 4 Write a response plan for performance outside the expected range.
- 5 Finalize standard work instructions.
- 6 Define training actions for team members.
- 7 Define audit or check-in frequency.
- 8 Compare before and after performance if pilot data is available.
- 9 Update the A3 report with root cause, countermeasure, result, and follow-up.
- 10 Prepare a five-minute presentation.
- 11 Present the project story to a peer or trainer.
- 12 Record lessons learned and remaining risks.

Validation and Deliverables

- Control plan has clear owner and frequency.
- Response plan says what to do when performance changes.
- A3 report tells the complete improvement story.
- Handover actions are practical.
- Control plan.
- Response plan.
- Final standard work.
- Final A3 report.
- Project presentation notes.
